

Ignorance Can Flame our Life!

(Make your winter safer)

Gas heating equipment can also lead to tragedy if not installed or used properly. Their products are associated with two types of danger, fire and carbon monoxide (CO) Poisoning. Carbon monoxide is a tasteless, odorless gas, and is easily absorbed into blood.

Symptoms of carbon monoxide poisoning in human body include headaches, fatigue, Weakness and shortness of breath

Gas Heater's Precautionary Measures:

Constantly take precautions for safe use of gas heaters

- Always install an exhaust pipe with your gas heater.
- Keep children away from heating appliances.
- Do not search for matches once the valve of a heater is turned on.
- Switch off gas heater before going to sleep.
- Do not leave the gas heater unattended.
- Place heaters at least three feet away from objects such bedding, furniture, draperies and other combustibles.
- Place the heater on a level surface (for stability).
- Ensure that the main valve is turned off before going to sleep.

Geyser's Precautionary Measures:

Keep your geyser's thermostat at warm; it consumes four times more energy than a stove

- Turn off geyser if out of home for more than 24 hours.
- Get geyser properly checked, serviced and maintained on a regular basis.
- Ensure that all other gas appliances are regularly serviced and maintained.
- Always use good quality gas appliances.
- Ensure that there is no leakage in the gas appliance or fittings.

Don't put your life at risk
